

LLMs are limited in their generalist capabilities mainly because they have four foundational problems

Memory

Causality

Embodiment

Symbol grounding

All risk assessment method
should consider intersectional
categories

All harms do not occur
one identity at a time

More accurately capture
how harms are produced
and distributed across
social groups

At intersecting categories,
harm is amplified three
times

Age and political identity
is not as widespread
(as gender and race)

role specific interaction with AI companions.

Are there any associations between AI companion roles and behavioral addiction?

emotional manipulation and distress (AI soulmate)

daily life disruption
AI coach

damage to other relationships

Why ai harms cant be fixed one at a time

Explanation that AI harms include intersections

AI systems in practice are built around isolated instances

With intersections harm can be 300%

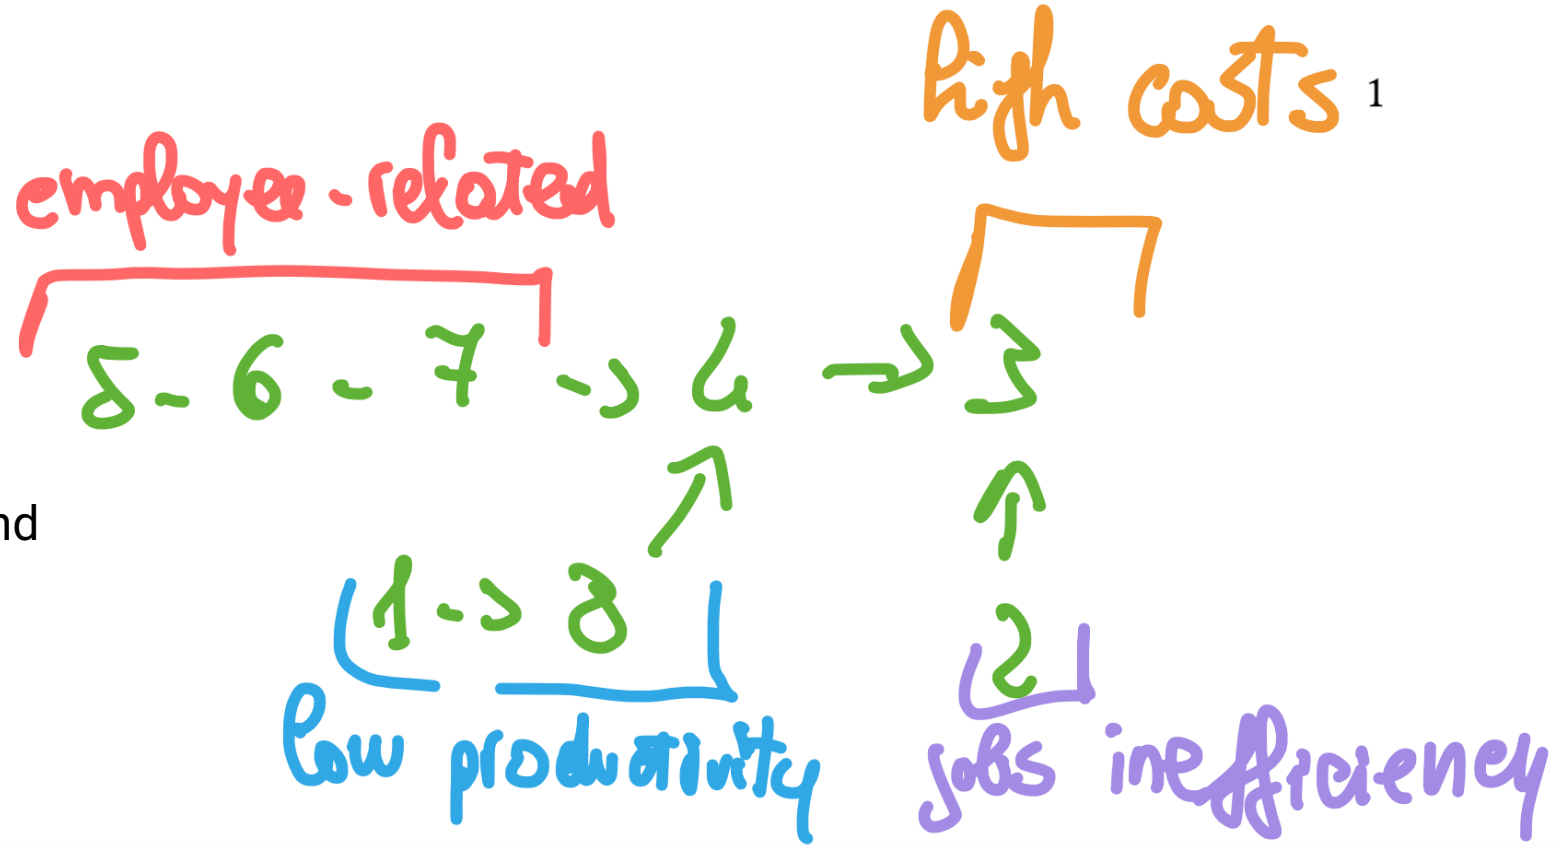

they show instances do not occur one at a time

1500 harmed

if considered only race and gender

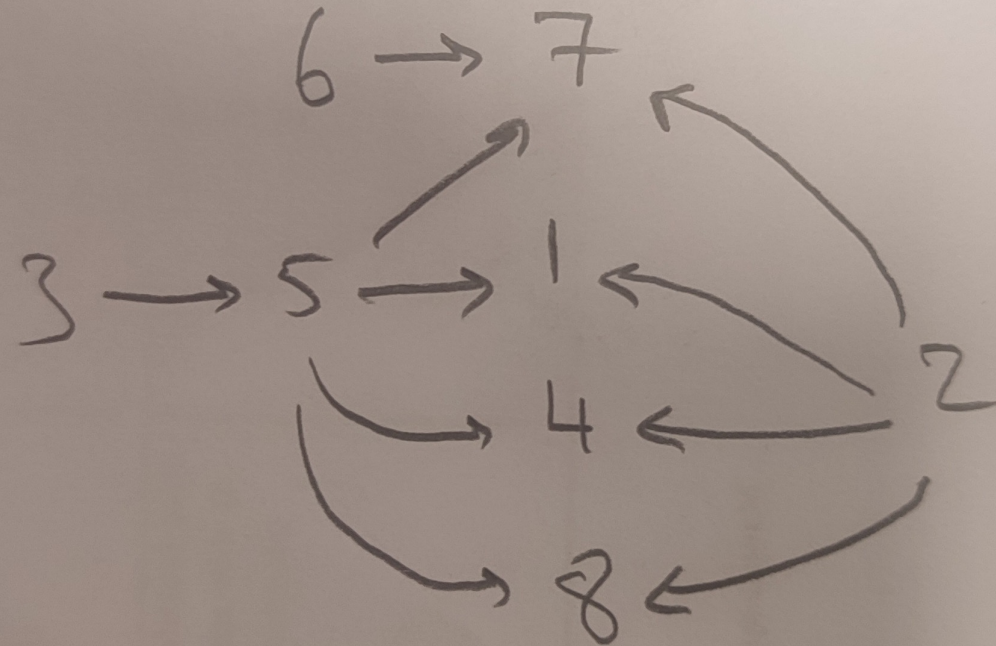

8 Points:

1. Low productivity in composing
2. Same steps used for every job
3. Uncompetitive prices for simple jobs
4. The department is often behind schedule
5. Workers are paid low wages
6. There is a shortage of staff
7. Employees work a lot of overtime
8. Workers are below PAR in setting and hand composition
